EDUCATION

GAME DEVELOMPENT - CDV POZNAŃ
2024 - NOW

SKILLS

LANGUAGES

- C#
- JavaScript
- TypeScript

STATE & UI SYSTEMS

- Figma
- Async Data Handling

GAME ENGINE & AUDIO

Unity

- C# Gameplay Logic
- Component-Based Architecture

FMOD

- Audio Integration
- Sound Design

OTHERS

- Git
- Figma
- Scrum
- UI/UX Optimization
- CI/CD
- Accessibility (A11Y)

Adaptable Software Engineer with 5+ years of full-stack development experience, actively transitioning into game development. Solid foundation in C# programming, Unity engine fundamentals, and interactive audio implementation using FMOD. Combines strong software architecture principles, debugging practices, and professional team experience with a dedicated focus on gameplay mechanics and game design.

WORK EXPERIENCE

Full-stack developer

Colab.ai Oct *2024 to April 2025*

- *Mentored junior developers, conducting code reviews and guiding software design best practices.*
- *Designed and integrated API endpoints and database integrations for complex, real-time data handling.*
- *Built a custom user session management system from scratch, ensuring secure and performant state handling.*

Data Apps Engineer

Bitpeak Dec *2023 to Oct 2024*

- Refactored legacy systems to optimize performance, eliminate technical debt, and ensure application stability.
- Successfully adapted to and delivered on four distinct client projects with diverse tech stacks and requirements.
- Implemented custom interactive components and polished user experience flows according to strict performance and visual specifications.

ACTIVITIES

- **Academic & Game Jam Project Leadership**: Lead developer for university game design and software projects. Took ownership of project scope, architecture, gameplay scripting in C#, and audio integration using FMOD while coordinating team tasks to ensure timely delivery.
- **Rapid Prototyping & Mechanic Implementation**: Continually build small-scale Unity prototypes to test game mechanics, physics interactions, player movement systems, and audio-trigger pipelines.
- **Game Industry & Engine Tracking**: Actively follow game engine updates, technical talks (GDC, Unity Unite), and architectural trends in gameplay programming, UI design, and audio middleware.
- **Game Deconstruction & Analysis**: Analyze published indie and AAA games across mechanics, level flow, and sound design to understand design choices and reverse-engineer gameplay systems.
